HUYNH, CONG LAC T

ART UNIT PAPER NUMBER

2178

DATE MAILED: 06/01/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No. 09/595,622	Applicant(s) SIMONS, GEOFFREY W.	
Examiner Cong-Lac Huynh	Art Unit 2178	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 07 March 2006.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-8, 11, 19, 20, 22, 23, 27, 28 and 36 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-8, 11, 19-20, 22-23, 27-28, 36 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 - Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 - Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date _____.
- 4) Interview Summary (PTO-413) Paper No(s)/Mail Date. _____.
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: _____.

DETAILED ACTION

1. This action is responsive to communications: response filed 3/7/06 to the application filed on 6/16/00, priority filed 6/16/99.
2. Claims 1-8, 11,19-20, 22-23, 27-28, 36 are pending in the case. Claims 1, 11, 19, 26, and 36 are independent claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2178

5. Claims 1-8, 11,19-20, 22-23, 27-28, 36 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Markus et al. (US Pat No. 6,490,601 B1, 12/3/02, filed 1/15/99) in view of Mohan et al. (US Pat App Pub No. 2003/0140312 A1, 7/24/03, filed 11/26/02, priority 5/14/99).

Regarding independent claim 1, Markus discloses:

- creating a user profile associated with a user, wherein said user profile includes user data (**figure 6, #604, #608**: retrieving user's raw data profile and merging user's raw data profile with mapping table inherently show that each of a plurality of user profiles are created and stored in memory so that the user data profiles including user data can be retrieved or used later)
- obtaining an electronic form having a field to be completed (**col 5, lines 1-12, 29-35**: "a form mapping containing a set of associations between *fields in the electronic form ...*", "...enabling automatic insertion of user information into an *electronic form having multiple fields ...*")
- dynamically generating a form map, wherein the form map identifies an association between the user data and the field in the electronic form (**col 5, lines 1-55**: "A form mapping containing a set of association between fields in the electronic form ... Each raw data file containing data strings, each data string corresponding to a pre-named field. Each raw data file is associated with a registered user ... The form mapping is utilized to attach a data string to the field in the electronic form where the pre-named field and the field in the electronic

Art Unit: 2178

- form have been previously matched or mapped ... a form mapping is utilized to attach a data string to the field in the electronic form ... comparing data relating to the field in the electronic form...”; since each user has different raw data file, generating such form map varies according to each user data file, said generating is performed dynamically according to each user; **col 14, line 30 to col 16, line 28**: “... the user cookie is used to obtain the user’s raw data, which includes actual data values and preferences associated with each data value. The practices mentioned above associated with legacy names and the preferences associated with user raw data values are stated in terms of conditions ...”; mapping data into the form is performed according to the form map where the form map (or the form mapping) varies according to various conditions and preferences from each user inherently shows that the form map is generated dynamically according to various conditions and preferences from each user)*
- obtaining the user profile from a fill server (**col 5, lines 29-41, 45-55**: “a server for enabling *automatic insertion of user information into an electronic form having multiple fields ...The server contains a memory area storing multiple raw data profiles where each raw data profile corresponds to a registered user ...”, “*the raw data profile includes several standard field names, each standard field name having a corresponding data string and a use-preference data item determined by a registered user...*”)*

Art Unit: 2178

- completing the field according to the form map with the user data (**figure 4B, #440, [0099]**: "Browser transmits *filled out electronic form document*" inherently shows completing a field according to the form map for a field in the electronic form with the user data in the raw data file; **col 6, line 63 to col 7, line 23**: filling a form with data from the privacy bank shows completing the field in the form with the user data according to the form map)

Markus does not disclose:

- obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field
- updating the user profile with the user entered data

Mohan discloses:

- obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field ([0095]: user enters data not found in the user's profile to the form)
- updating the user profile with the user entered data ([0095], [0096], [0102], [0092]: *storing the form submitted with user-entered information to the IIM at server* where the user-entered data can be data not found in the user's profile implies that data in the user profile at IIM is updated with the user-entered data)

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Mohan into Markus for automatically updating the user

Art Unit: 2178

profile with user-entered data which is not found in the user profile. Thus, users do not have to remember to update the user profile every time they enter a new data not in the user profile before.

Regarding claim 2, which is dependent on claim 1, Markus discloses that obtaining a user profile includes:

- transmitting a user identification and a signature of the electronic form to a fill server (**col 8, lines 1-14**: "User 302 informs privacy bank server 308 of the *identity of the user and of which Web site and which form on that Web site (if more than one) the user wishes to have filled in. This information is transmitted to privacy bank server ...*")
- obtaining the user profile from the fill server, wherein the user profile corresponds to the user identification (**col 8, lines 40-64**: the raw data profile storage area 328, one of the components of the privacy bank server which enables to fill in the electronic form on a remote user computer, includes the data profile for each registered user)

Regarding claim 3, which is dependent on claim 2, Markus discloses that the user identification includes a user ID and a user password (**col 8, lines 40-64**: "a registered user has an unique account that can be used as an identifier and a password...").

Regarding claim 4, which is dependent on claim 2, Markus discloses that the electronic form signature includes a text string having a uniform resource locator of the electronic

Art Unit: 2178

form (**col 7, lines 40-62**: "a purchasing form, typically an HTML document, is returned and downloaded into and displayed in a browser window..."; the fact that the purchasing form is a HTML document inherently shows that the HTML document, which includes the electronic form, has an uniform resource locator; **col 11, lines 43-49**: the user identifier and the URL for identifying the document containing the form; **col 13, lines 38-48**: the identifier of the electronic form contains the identifier of the merchant's Web site in the form of a URL).

Regarding claim 5, which is dependent on claim 4, Markus discloses that the electronic form signature includes a descriptor of the one or more fields of the electronic form (**col 17, lines 8-15**: the name strings or field names or guides to entering data in an electronic form; **col 9, lines 1-13**: the field names are the descriptors of the fields in an electronic form).

Regarding claim 6, which is dependent on claim 4, Markus discloses that the electronic form signature includes a descriptor of form field requirements (**col 11, lines 39-49**: the fact that the URL which is used by the privacy bank server *to determine how the electronic form document should be filled* implies that said URL, which is the electronic form signature, contains a descriptor of form field requirements).

Regarding claim 7, which is dependent on claim 1, Markus discloses that the user profile is represented by a graphical icon on a display screen and wherein the user data

Art Unit: 2178

is transferred to the electronic form on manipulation of the graphical icon within the display screen (**col 11, lines 15-22**: “.. by *clicking on the autofill button*, the user allows the browser to execute the shippable code or *profile stored thereon...*”).

Regarding claim 8, which is dependent on claim 1, Markus discloses that the user profile includes shippable code embodying the user data corresponding to the fields of the electronic form, and wherein completing at least one of the fields of the electronic form includes executing the shippable code to complete at least one of the fields of the electronic form (**col 5, lines 29-44**).

Regarding claim 11, which is dependent on claim 1, Markus discloses:

- displaying a second application indicative of the user profile containing data corresponding to at least the field of the electronic form according to the form map (**figure 4A, #408-418**: the fact that the browser for displaying the electronic form connects with the privacy bank and gets cookie and user data corresponding to the cookie from the privacy bank server inherently shows that the user profile data of the privacy bank server is displayed in a different window in a second application; **col 10, lines 1-35 and col 8, lines 19-39**)

Regarding claim 19, which is dependent on claim 1, Markus discloses:

Art Unit: 2178

- generating a fill bundle corresponding to a merger of data within at least one of the user profile and the form map corresponding to a form signature, wherein the fill bundle is embodied in a graphical representation (**figure 6, #608** Server merges mapping table with user's raw data profile, **#610** Server converts merger into shippable code and **col 13, line 49 to col 14, line 29**: generating a shippable code in the form of a JavaScript program where the shippable code, converted from the merger of legacy bank name and raw data value associated with one of a plurality of users, is used to fill in the form on the user browser; the shippable code bundles data for filing the electronic form, and is corresponding to a fill bundle)

Regarding claim 20, which is dependent on claim 1, Markus discloses obtaining the user profile corresponding to a user identification from a database having one or more user profiles organized according to the user identification (**figures 3A-B and col 8, lines 40-64**: raw data profile contains sets of data relating to registered user of the privacy bank service where a registered user has a unique account number as a user identification).

Regarding claim 22, which is dependent on claim 1, Markus discloses that if the form map database does not have a form map corresponding to the form signature, generating a new form map based upon the form signature (**col 13, line 49 to col 14, line 4**: the privacy bank server uses the URL or other identifier for the specific form to

Art Unit: 2178

be filled out to retrieve a mapping of each field name in the electronic form to privacy bank standardized names; the merchant submits one or more forms to privacy bank which then examines each field name in the forms and matches it with a privacy bank field name; the fact that if the legacy name does not match the privacy bank field names, then the privacy bank user raw data *can be updated* to include the legacy name based upon the identifier of the form indicates that when the privacy bank server whose form map database does not have the form map of the newly submitted form from the merchant, the privacy bank raw data *is updated to include the newly created form map of the new form based upon the corresponding URL or the form signature*).

Regarding claim 23, which is dependent on claim 19, Markus discloses that the fill bundle includes shippable code containing commands for completing one or more corresponding fields of the electronic form (**col 14, lines 5-29**: "normally browser programs have a JavaScript component that is manipulable by JavaScript commands. *These JavaScript commands in the shippable code are used to fill in the electronic form on the browser*, a technique well known in the field of Internet and Java programming..").

Regarding claim 27, which is dependent on claim 1, Markus discloses that the system further comprises a user information server in communication with the fill server and providing user profile data to the fill server (**col 7, line 63 to col 8, line 39**: the fact that the Markus system has the capability of providing user profile data and creating fill

Art Unit: 2178

bundle embodied in shippable code for filling data in the user profile to electronic forms in a remote computer inherently shows that the Markus system includes a user information server in communication with the fill server).

Regarding claim 28, which is dependent on claim 1, Markus discloses a form map server in communication with the fill server and providing form maps corresponding to at least one field of an electronic form, wherein a graphical representation includes a merger of the form map and the user profile data (**figure 6 and col 13, line 49 to col 14, line 29**: the merger of mapping table, including form map, with user's raw data profile in a user's browser shows that the graphical representation of the browser window includes the merger; the mapping table retrieved from the privacy bank database connected to the user's browser where to display the form and the web site that contains the form and to fill in the form inherently shows that the privacy bank database which stores the table of form mapping is considered as a form map server, and the privacy bank server is where to create the fill bundle embodied in shippable code is considered as the fill server).

Regarding independent claim 36, Markus discloses:

- creating a user profile associated with a user, wherein said user profile includes user data (**figure 6, #604, #608**: retrieving user's raw data profile and merging user's raw data profile with mapping table inherently show that each of a plurality

Art Unit: 2178

of user profiles are created and stored in memory so that the user data profiles including user data can be retrieved or used later)

- obtaining an electronic form having at least a field to be completed (**col 5, lines 1-12, 29-35**: “a form mapping containing a set of associations between *fields in the electronic form ...*”, “...enabling automatic insertion of user information into an *electronic form having multiple fields ...*”)
- dynamically generating a form map, wherein said the form map identifies an association between the user data and the field in the electronic form (**col 5, lines 1-55**: “A form mapping containing a set of association between fields in the electronic form ... Each raw data file containing data strings, each data string corresponding to a pre-named field. Each raw data file is associated with a registered user ... The form mapping is utilized to attach a data string to the field in the electronic form where the pre-named field and the field in the electronic form have been previously matched or mapped ... a form mapping is utilized to attach a data string to the field in the electronic form ... comparing data relating to the field in the electronic form...”; since each user has different raw data file, generating such form map varies according to each user data file, said generating is performed dynamically according to each user; **col 14, line 30 to col 16, line 28**: “... the user cookie is used to obtain the user’s raw data, which includes actual data values and preferences associated with each data value. The practices mentioned above associated with legacy names and the preferences associated with user raw data values are stated in terms of

Art Unit: 2178

conditions ..."; mapping data into the form is performed according to the form map where the form map (or the form mapping) varies according to various conditions and preferences from each user inherently shows that the form map is generated dynamically according to various conditions and preferences from each user)

- obtaining the user profile from a fill server (**col 5, lines 29-41, 45-55**: "a server for enabling *automatic insertion of user information into an electronic form* having multiple fields ...*The server contains a memory area storing multiple raw data profiles where each raw data profile corresponds to a registered user ...*", "*the raw data profile includes several standard field names, each standard field name having a corresponding data string and a use-preference data item determined by a registered user...*")
- completing the field according to the form map with the user data (**figure 4B, #440**: "Browser transmits *filled out electronic form document*" inherently shows completing a field according to the form map for a field in the electronic form with the user data in the raw data file; **col 6, line 63 to col 7, line 23**: filling a form with data from the privacy bank shows completing the field in the form with the user data according to the form map)

Markus does not disclose:

- obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field

Art Unit: 2178

- updating the user profile with the user entered data

Mohan discloses:

- obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field ([0094]: user enters data not found in the user's profile)
- updating the user profile with the user entered data ([0095], [0096], [0102], [0092]: storing the form submitted with user-entered information to the IIM at server where the user-entered data can be data not found in the user's profile implies that data in the user profile at IIM is updated with the user-entered data)

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Mohan into Markus for automatically updating the user profile with user-entered data which is not found in the user profile. Users, thus, do not have to remember to update the user profile every time they enter a new data not in the user profile before.

Response to Arguments

6. Applicant's arguments filed 3/7/06 have been fully considered but they are not persuasive.

Applicants argue that Mohan does not disclose or suggest at least "obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field, and updating the user profile with the user entered data."

Art Unit: 2178

Examiner respectfully disagrees.

Mohan discloses:

- obtaining user entered data from the electronic form, wherein the user entered data is at least one of absent from the user profile and different from the user data in a corresponding field ([0095]: user enters data not found in the user's profile to the form)
- updating the user profile with the user entered data ([0092], [0095], [0096], [0102]: *storing the form submitted with user-entered information to the IIM at server where the user-entered data can be data not found in the user's profile implies that data in the user profile at IIM is updated with the user-entered data*)

As in the cited portions above, a user is allowed to enter data not in the user profile when filling a form that requests such data ([0095]). Then, when the filled form is submitted to the destination server, the IIM stores the submitted information to the server in the user's transaction database ([0096]). The IIM then updates the information added by the user ([0102]). Further, it is noted that the data in the user profile is tested to see if any change has been made to the user profile since *the transaction in the transaction database was recorded and the transaction records are dated as are changes to the user profile* ([0092]). This shows that changes recorded in the transaction database are dated as changes to the user profile. Therefore, when the transaction database is recorded with the added information entered by a user, that means, changes are added to the transaction database, *these changes are also dated as the changes to the user profile.*

Art Unit: 2178

Applicants further argue that in Mohan, there is no disclosure that a user profile is updated via the transaction database, and if any, such update would render Mohan at least partially inoperable. One of the reason provided by Applicants is that if the user chooses to remove their social security number from a form after the form has been filled, the changed form data will be saved to the transaction database, minus the social security number. When the same user subsequently fills out the same font, the form will not be filled with the social security number, as per the user's preferences. And this is not what the user wants.

The example that Applicants point out is not appropriate to the case that *new data*, which is *not present in the user profile before, is entered by users* and added to the transaction database as in Mohan. The social security number is known, not new data, which is not in the user profile before. And even when removing the social security number from the form, there is no new data entered compared with the data in the user profile as in Mohan. The data then is less than the data in the user profile before, and all is known, not new. Therefore, Applicants arguments are not persuasive.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Buhrmann et al. (US Pat No 5,933,778, filed 6/4/96).

Saccocio et al. (US Pat No 6,944,669, priority 10/22/99).

Kennedy et al. (US Pat No 6,651,217, filed 9/1/99).
